Most Common Billing Errors for Drugs Covered Under the Medical Assistance (MA) Program

The following guidelines are to be used for submission of pharmacy claims to the Pennsylvania MA program.

The Affordable Care Act (ACA) includes language to extend the federal rebate to drugs covered by the Medicaid Managed Care Organizations (MCOs). The language requires the State to collect the NDC and NDC units for all outpatient drug claims, regardless if payment is made based on HCPCS code, in order to invoice the manufacturers for the Federal Rebates.

For NCPDP claims, the drug form defines the correct unit of measure to be billed. NCPDP National Drug Code (NDC) units are in one of three categories:

- **EACH (EA)** is the correct billing unit for tablets, capsules, patches, non-filled syringes, international units, suppositories, etc.
- **MILLILITER (ML)** is the correct billing unit for liquids, suspensions, solutions, syrups, etc.
- **GRAM (GM)** is the correct billing unit for ointments, creams, balms, bulk powders, etc.

Currently the PROMISe™ crosswalk for unit values for both Professional Drug (837P) and Institutional Outpatient Drug (837I) is:

- 837 unit GR - Gram crosswalks to NCPDP unit GM - Gram
- 837 unit ML - Milliliter crosswalks to NCPDP unit ML - Milliliter
- 837 unit UN - Unit crosswalks to NCPDP unit EA - Each
- 837 unit F2 - International Unit crosswalks to NCPDP unit EA - Each
- 837 unit ME - Milligram does not crosswalk to NCPDP unit.
 - **Please convert the milligram to gram.** For example, if the provider dispensed 100mg of an ointment, the provider should bill 0.1gm.

When the actual number of units dispensed is a decimal quantity, the correct unit is a decimal, not a whole number.

The Covered Drug Search displays the Drug Unit Description for any drug and/or NDC. It is located at the following link from the Department of Human Services' (the department's) website:
